

FLOOR HEATING SYSTEMS

ENHANCE YOUR RV HEATING SYSTEM WITH NUHEAT

Save fuel and increase your comfort with a Nuheat Electric Floor Heating System, the smart alternative heating solution. Nuheat Custom Mats transform the entire floor area into a heat source, eliminating or significantly reducing the need to use your standard heat source.

DOESN'T REQUIRE FUEL CONSUMPTION

Electric radiant floor heat runs off your RV's electrical system, unlike forced air or hot water heat, which run off your vehicle's fuel supply. This also means you can heat your entire RV using shore power when available.

HEATS THE ENTIRE RV WITHOUT CIRCULATING POLLUTANTS

Forced air systems circulate dust and allergens while heating the air only. The Nuheat system uses the floor to warm all other surfaces as well as the air. The system can be designed to produce 12 watts/sq. ft. (41 BTU/sq. ft.) or 15 watts/sq. ft. (51 BTU/sq. ft.).

ENERGY EFFICIENT

By warming the surfaces you touch as well as the air, the Nuheat system can deliver improved comfort at a lower average ambient temperature, reducing the energy required for heating.

FORCED AIR OR RADIATORS

Excessively hot near heat sources & ceiling, cool surfaces

VS.

NUHEAT SYSTEM

Warm surfaces, consistent ambient temperature

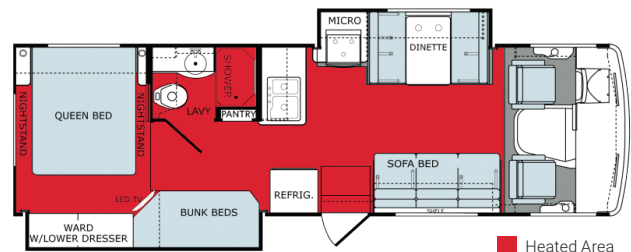

MAINTENANCE-FREE

Electric radiant heat does not require ductwork, boilers, gas fittings, air filters, or any additional equipment. There is no maintenance required.

PEACE OF MIND

Nuheat's industry leading Total Care Warranty backs the Nuheat floor heating system and the complete installation for 25 years.
